

Sharing Content During a Session

You have the ability to share content with other participants during your session; you can share specific documents, applications, or even the entire screen of your connected device.

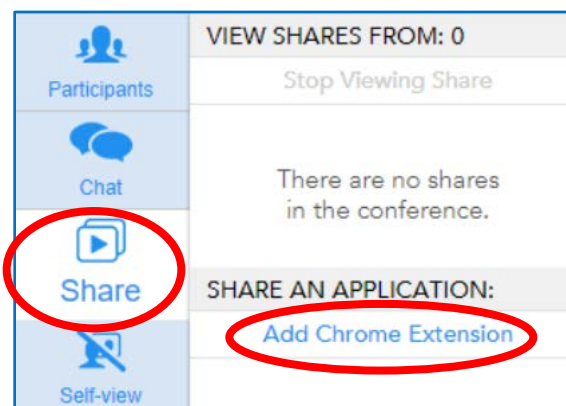

Note: The content sharing function is not available on the tablet or smartphone client, although tablet and smartphone users can view documents shared by other users.

If you know you will be sharing certain items, it may be helpful to have any content open prior to connecting to other participants. You will also be able to open such items after connecting if necessary.

Note: Most first-time users will need to download an additional plug-in to share content.

Downloading the Plug-In for Sharing Content

The following download images are specific to Google Chrome, but the process will be very similar for other supported web browsers. Google Chrome is recommended for the best experience. Mozilla Firefox is another good browser to utilize; visuals of how to share using Firefox are included below. Microsoft Edge is not supported at this time.

After connecting to a virtual room:

Click the **Share** icon,
 then **Add Chrome Extension**.
